edwardm5@utas.edu.au

Education

University Of Tasmania
Launceston, Tasmania.
Currently Studying:

Diploma Of Applied Technologies.
Enrolled 2025 – Graduation expected end of December 2026.

Undergraduate Certificate in ICT Professional Practice
Enrolled 2026 – Graduation expected end of semester 1 2027.

Industry Certification

ISC2 CC – Certified in Cybersecurity
Expected examination in first half of 2027.

Core Strengths

I believe my biggest strength is an eagerness to learn, further complemented by practical experience and operational workflows learnt in frontline management and self employment opportunities.

Technical skills stem from both studies and hobbies resulting in a foundational understanding of Python, Arduino, C/C++, YAML, HTML/CSS, BASH, GIT, embedded systems, networking, automation, self hosting, virtual machines and communication protocols, combining these skills when integratng and maintaining my own networked assets securely.

Experience

JANUARY 2021- JUNE 2023

Owner/Operator/Landscaper | Launceston Garden Solutions

Operations included scheduling, payments, digital records & secure customer data handling. Operated a small website & engaged with google SEO. Managing third party platforms to manage VOIP messaging for job coordination. Developed strong independent working methods, problem solving techniques, client facing business skills, deadline & project management tools.

AUGUST 2016 – JULY 2019

2IC/ Venue Operations Leadership | **Saint John Craft Beer**

Progressed from bartender and shift supervisor to 2iC responsibilities following restructuring. Venue operations included on & off site festivals involving scaled team management. Key skills developed involved personnel management, customer relations, shift operations, contact for external IT support staff, managing POS infrastructure, ensuring continuity during high pressure events, in addition to general warehousing and logistics.

PREVIOUS HISTORY 2012 - 2016

Supervisor | Emirates Leisure

Position at Launceston Airport working for various venues owned by Emirates Leisure. Required to hold Aviation Security Identification Card (ASIC). First team management experiences, valuable time spent working remotely with mainland leadership support.

Additional Details

Current enrollments align with foundational industry certifications I plan to work towards; AWS Certified Cloud Practitioner, Cisco Certified Network Associate (CCNA).

I possess a reliable vehicle, suitable for conditions across Tasmania on & off road, fitted with first aid & fire extinguishers.

Industry Memberships

Australian Information Security Association
Complimentary Associate
Membership Number: 36955

ISC2
Candidate
Membership Number: 2263299

University Of Tasmania.
Launceston, Tasmania.
Student Alumni, School of ICT.

IEEE
Member
Membership Number: 101360764

Relevant Hobbies & Interests

Hardware prototyping, Robotics, Machine learning, Embedded design, Reverse engineering, Automation, 3D Design, Additive manufacturing, Networked computing.

Technical Projects

Remote Valve Control & Sensor Node.
To affirm skills developed in my applied technology studies, I decided to iterate on a prior pump controller project. Prototyping a similar microcontroller-based deployment utilizing a locally available ESP32/Atmel combination board to control H-bridge motor drivers, relays and environmental sensors with GPS for timekeeping. Single source of truth architecture between scheduling, decision making logic and networking the device to a local Home Assistant instance. Recently an initial field test deployment was conducted on a live irrigation system. Controlling 3 zones (Valves) with strong network and GPS signal, the prototype passed 10/11 test requirements. This project continues to be a rich source of learning, currently focused on documentation while preparing for next design sprint.

Modified SAP1/Ben Eater 8-bit computer.
Inspired by Ben Eaters YouTube series "Building a 8-bit Computer" I followed along with the addition of utilizing my own configuration of discrete logic circuits. This served to supplement learning during a unit 'Electrical and Digital Control Systems'. This project taught me stack structure, foundational understanding of assembly language, memory allocation and deep appreciation for the transistor.
An enjoyable challenge and source of learning was salvaging and repurposing RAM from a Sega Mega console.

Software Defined Radio Research. SDR4 & Hak-RF
To improve my understanding of radio communication and ultimately serve as a reverse engineering tool, SDR's have been a useful tool for visualization and investigation.
